

This is the Cartridge World colour test page.

Please print this page on 80 gsm paper in normal quality and at full size. Is the print quality not as expected? It is possible that your printer cartridges simply need to be replaced however this can differ between printers.

If your print quality is poor and you have recently installed cartridges then please send a photo or scan of this page and your printers test page to our Customer Service team.

We will then review the print quality images and advise on how to fix the problem.

This smaller text is just to ensure that your print quality is clear and sharp even with fine print.

Using this page you can see from the different boxes and lines which colour is causing a problem.
